

Annotated edition — v0.3.4. The complete v0.01 Alpha source with commentary embedded in the listing — context anchored to the lines it explains, not siloed in a separate appendix.

On January 3, 2009, Satoshi Nakamoto launched Bitcoin with a single executable and these 2,300 lines of C++.

This volume walks that first public release file by file. Explanations appear inline: annotation blocks break the code flow where they belong, so you read the original source and the commentary as one continuous thread — data structures, algorithms, and design choices spelled out without leaving the program in front of you.
